# IOSH Managing Safely in Airports and Aviation

The Managing Safely in Airports and Aviation course offers an in-depth insight into the health and safety management challenges within the unique and regulated airport environment. This IOSH approved certification is tailored for airport workers, helping employers achieve their health and safety goals, mitigate hazards, reduce incidents, and comply with CAP642 and UK HSE legislation.

## Benefits for Learner

- A solid introduction to airport and aviation safety management.
- Knowledge of health and safety responsibilities within the airport sector.
- Skills to assess and manage risks in airside and landside operations.
- Techniques for effective accident and incident investigations.
- Insights into evaluating health and safety performance and understanding human factors in accidents.

## Benefits for Employer

- Ensures managers and supervisors are well-informed and vigilant in handling health and safety in airport operations.
- Helps in meeting CAP642 and UK HSE legislative compliance, clarifying the relationship between HSE and CAA regulations.

## Assessment

Participants must complete a 45-minute multiple-choice exam and a workplace health and safety risk assessment within two weeks to successfully pass the course.

## Target Audience

Ideal for line managers and supervisors in companies operating in both airside and landside airport sectors.

## Course Overview

**Duration:** Four days

**Learning Methods:** Virtual
